

# My First Latex Document

Gavin Jaeger-freeborn

## 1 Quick tips

The date parameter is optional.

If you want to start a new paragraph simply hit enter twice.

### 1.1 Subsection

A subsection is declared using subsection

Normal text. **Bold text** *Italics text emphatic text*

Underlined text

## 2 quotes in latex

Here is where things get weird

”quotes don’t work like they should”

“you have to use 2 graves and 2 apostrophes”

## 3 Lists

### 3.1 Enumerate

1. use the term begin enumerate for ordered list
2. they automatically number themselves
3. don’t forget to use end to stop the list

### 3.2 Itemize

- for an ordered list just use itemize instead of enumerate
- this uses bullets instead
  - to make a sub list of either type just begin a new list and end it inside.
- don’t forget to end itemize

### **3.3 Labeled Sections and References**

refer to example 4

You will have to compile twice

## **4 example**
